November and December 2016

The PQL (Practical Quantitation Level) or the lowest level that can be reliably achieved with the specified limits of precision and accuracy during routine laboratory operating conditions.

The REIC Lab test result is measured against a PQL of 0.0010 mg/l or 1 ppb (part per billion).

Where the result is less than the PQL (1 ppb) the result below is shown as <1.0 or less than 1 ppb.

The EPA "lead action level" is 15 ppb.

<b>Date</b>	<b>Charles Town</b>	<b>Block</b>	<b>Result in ppb</b>
